

CLAIMS

1. A method of attracting the attention of a user of a mobile terminal, the method comprising:
 - the mobile terminal receiving audio information,
 - 5 - providing the audio information to the user,
 - the user operating, during the providing step, selecting means of the mobile terminal so as to select part of the audio information,
 - the mobile terminal subsequently attracting the attention of the user by playing the selected part of the audio information.
- 10 2. A method according to claim 1, wherein the selecting step comprises storing the selected part of the audio information in the mobile terminal.
3. A method according to claim 1, wherein the providing step is performed by a signal source transmitting the audio information to the mobile terminal.
4. A method according to claim 1, wherein the mobile terminal is a mobile telephone, and
15 wherein the attracting step comprises the mobile telephone receiving an incoming telephone call.
5. A mobile terminal comprising:
 - means for receiving audio information,
 - means for allowing the user to select part of the audio information, while the
20 receiving means receive the information,
 - means for attracting the attention of the user by playing the selected part of the audio information, and
 - means for determining that the attention of the user is desired/required, the determining means being adapted to operate the attracting means
- 25 6. A mobile terminal according to claim 5, further comprising means for providing the information to the user while receiving the information.
7. A mobile terminal according to claim 5, wherein the selecting means comprises a push button, a depression of which defines a starting point of the selected part of the audio information.

8. A mobile terminal according to claim 7, wherein the selecting means comprises a push button, a depression of which defines an ending point of the selected part of the audio information

5 9. A mobile terminal according to claim 5, wherein the mobile terminal is a mobile telephone and wherein the determining means are adapted to operate the attracting means when receiving an incoming telephone call.

10. A mobile terminal comprising:

- means for receiving audio information,
- means for providing the audio information to the user,
- 10 - means operable by the user for selecting part of the audio information, while providing the information,
- means for attracting the attention of the user by playing the selected part of the audio information, and
- means for determining that the attention of the user is desired/required, the
- 15 determining means being adapted to operate the attracting means.

11. A mobile terminal according to claim 10, wherein the selecting means comprises a push button, a depression of which defines a starting point of the selected part of the audio information.

12. A mobile terminal according to claim 11, wherein the selecting means comprises a push
20 button, a depression of which defines an ending point of the selected part of the audio information.

13. A mobile terminal according to claim 10, wherein the mobile terminal is a mobile telephone and wherein the determining means are adapted to operate the attracting means when receiving an incoming telephone call.

25 14. A software system for performing the steps of claim 1 in a mobile terminal.
